

**CDP 75
DEHUMIDIFIER**

Function

The CDP 75 works in accordance with the condensation principle. A fan draws the humid air into the dehumidifier and through an evaporator coil. When passing through the evaporator the air is cooled down to below its dew point temperature, and its content of water vapour is condensed into water, which falls into the drip tray and then is led from the drip tray to a drain. The cold, dry air is then passed over the condenser coil where it is re-heated, before leaving the unit at a temperature, which is approx. 5°C higher than at the inlet.

Applications:

- Indoor swimming pools
- Therapy pools
- Wellness centres
- Hotel pools

FEATURES

- The CDP 75 is built into a cabinet made of powder-coated hot-galvanized double-skinned panels with 50 mm insulation
- Evaporator and condenser coils are epoxy-coated for higher corrosion resistance
- All external and internal parts of the cabinet are powder-coated
- The condensate outlet is located on the air inlet side of the CDP 75. The outlet stub can be connected to a 3/4" water hose.
- Ø400mm air inlet through a filter placed in a removable frame
- Ø400mm dry air outlet positioned either horizontally, or vertically through the top of the unit
- The access for inspection can be moved to the opposite side
- Fresh air inlet possible through Ø160mm fresh air duct
- The CDP 75 can be supplied with an optional water-cooled condenser. The Ø15mm coupling pipes of the water-cooled condenser are made of copper
- The CDP 75 can be wall mounted utilising the wall mount kit or it can be placed on the floor utilising the shockabsorbing floor mount kit (optional extra)
- A water heating coil can be mounted in the air outlet duct for further heating of the dry air (optional extra)

Capacity of water-cooled condenser

Connection	CDP 75 Ø15 mm
Max. water flow	600 l/h
Max. capacity*	4,0 kW
Pressure drop	10 kPa

*Running conditions: LP 10°C, HP 40°C, water temperature 28°C

Electronic control

The CDP 75 is fully automatic with electronic control. An easy to read display panel indicates the current status of operation.

1. Power on
2. Dehumidification – the compressor is on
3. Cooling circuit failure – the dehumidifier is switched off
4. Water heating coil is activated

Push buttons allow switching on and off control of dehumidification, re-heating coil and continuous ventilation.

If a controlled and constant relative humidity is required, room or duct hygrometers can be connected to the CDP 75. If the CDP 75 is used with a water-heating coil, the control is prepared for connection of a room thermostat.

Defrosting

If the CDP 75 is used in the temperature range between 15 and 20°C, passive, demand-controlled defrosting can be achieved by fitting a defrosting sensor on the evaporator coil.

TECHNICAL DATA

Model	CDP 75
Operating range – humidity	40 – 100 %RH
Operating range – temperature	20 – 38 °C
Air volume	1500 m ³ /h
Max external pressure	140 Pa
Max. fresh air supply	225 m ³ /h
Power supply	1x230/50 V/Hz
Max. ampere consumption	9,5 A
Max. power consumption	2,0 kW
Refrigerant	R407C
Quantity of refrigerant	2,100 kg
Compressor	Rotary
Sound level (at 1 metre)	58 dB(A)
Weight	130 kg
Filter	EU 3
Colour	RAL 9016
Protection class	IPX4

CDP 125 DEHUMIDIFIER

Function

The CDP 125 works in accordance with the condensation principle. A fan draws the humid air into the dehumidifier and through an evaporator coil. When passing through the evaporator the air is cooled down to below its dew point temperature, and its content of water vapour is condensed into water, which falls into the drip tray and then is led from the drip tray to a drain. The cold, dry air is then passed over the condenser coil where it is re-heated, before leaving the unit at a temperature, which is approx. 5°C higher than at the inlet.

Applications:

- Indoor swimming pools
- Therapy pools
- Wellness centres
- Hotel pools

FEATURES

- The CDP 125 is built into a cabinet made of powder-coated hot-galvanized double-skinned panels with 50 mm insulation
- Evaporator and condenser coils are epoxy-coated for higher corrosion resistance
- All external and internal parts of the cabinet are powder-coated
- The condensate outlet is located on the air inlet side of the CDP 125. The outlet stub can be connected to a 3/4" water hose
- Ø400mm air inlet through a filter placed in a removable frame
- Ø400mm dry air outlet positioned either horizontally, or vertically through the top of the unit
- The access for inspection can be moved to the opposite side
- Fresh air inlet possible through Ø160mm fresh air duct
- The CDP 125 can be supplied with an optional water-cooled condenser. The Ø15mm coupling pipes of the water-cooled condenser are made of copper
- The CDP 125 can be wall mounted utilising the wall mount kit or it can be placed on the floor utilising the shockabsorbing floor mount kit (optional extra)
- A water heating coil can be mounted in the air outlet duct for further heating of the dry air (optional extra)

Electronic control

The CDP 125 is fully automatic with electronic control. An easy to read display panel indicates the current status of operation.

1. Power on
2. Dehumidification – the compressor is on
3. Cooling circuit failure – the dehumidifier is switched off
