

## Corner Clamps

Duct connection **Corner Clamps** are made from **galvanized steel** and are designed for use in HVAC air duct systems with flange corners. They can be used in combination with duct cleats.

The clamp has **width 2,5 mm** and secures the 2 air ducts by pressing the profiles together using a bolt **M8 x 20mm**.

This results in a quick, flexible and easy installation. It is a reliable and cost effective alternative to duct cleats in projects where the ducts can vary in size. The clamps will keep the connection tight and secured even if the 2 flanges that are connected have different size.

The clamps are delivered in packages of 250 pcs.
